

Kaaveh Mohamedi

Senior Android Engineer

Yerevan, Armenia (Open to relocation) | Kaaveh@pm.me | [LinkedIn.com/in/Kaaveh](https://www.linkedin.com/in/Kaaveh) | [GitHub.com/Kaaveh](https://github.com/Kaaveh) | [Medium.com/@Kaaveh](https://medium.com/@Kaaveh)
| [YouTube.com/@CodeWithKaaveh](https://www.youtube.com/@CodeWithKaaveh)

7+ years building consumer apps at scale, specializing in Jetpack Compose migrations, modular architecture, and developer productivity. Active contributor to the Android community - 3 conference talks, 7 Medium articles, and open-source projects with 500+ combined stars.

Experience

Footballi — Senior Android Engineer

February 2025 – Present

Live-streaming sports platform, 10M+ MAU, real-time data.

- Shipped the Footballi **Android TV** app in ~2 months ahead of the 2026 World Cup, owning UX decisions and delivering a **Jetpack Compose** for TV build with Navigation3, Media3/ExoPlayer, and custom D-pad focus handling.
- Introduced automated integration testing (JUnit, Kotest), reducing the manual QA cycle and shortening release cadence from bi-weekly to weekly, a 55% improvement.

GityMarket — Android Engineer

June 2019 – February 2025

E-commerce platform powering 1,000+ retail businesses.

- Migrated core UI from XML view to Jetpack Compose, increasing development speed and feature delivery by ~25% through reusable component libraries.
- Transitioned app architecture from **MVVM + Clean** to **MVI + Clean** (feature modules), improving ViewModel testability and reducing UI-related bugs by ~10%.
- Extended and maintained a **Server-Driven UI** framework, adding new widgets that enabled easier deployment of new features without needing a new Android app release.
- Implemented a centralized **Design system** (themes, tokens, shared widgets) used across modules — reduced UI inconsistency and dev time for new screens by ~20%.
- Reduced CI build times by 40% through refactoring module structure, inter-module dependencies, and merging/splitting modules based on business logic.
- Drove a codebase-wide migration off deprecated APIs ahead of targetSdk 34 / Android 14 compliance.

Skills

Languages & Async: Kotlin, Kotlin Multiplatform (KMP), Java, Coroutines, Flow

UI: Jetpack Compose, Compose Multiplatform, Material 3, XML Views, Navigation 3, Media3/ExoPlayer

Architecture: Clean Architecture, MVI, MVVM, Modularisation, SOLID, OOP, Server-Driven UI

Networking & Data: Retrofit, OkHttp, Ktor, Room, SqlDelight, DataStore, Firebase, WorkManager, Dagger-Hilt, Koin

Testing: JUnit, Kotest, Mockk, Turbine, TDD, BDD

Build & CI: Gradle, Kotlin DSL, Convention Plugins, GitLab CI, GitHub Actions, Detekt, ktlint

Observability: Crashlytics, Firebase Analytics, Sentry, Appmetricsa

Volunteering

- Presented three technical talks at LogCat conference.
- Published a master course on SqlDelight via Droidcon, the global Android developer conference organization partnered with Google, Meta, and Amazon.
- Mentored 20+ software engineers.**

Projects

ComposeNews — github.com/Kaaveh/ComposeNews

Reference Compose architecture project: modularized feature/data/domain layers, design system, MVI, CI with quality gates; 370+ stars, used as a teaching reference in a conference talk

SDP-Compose — github.com/Kaaveh/sdp-compose

Published Kotlin library providing scalable size units for Jetpack Compose.

Education

Master of science in Software engineering — Tarbiat Modares University

Taught Android development in collaboration with the IEEE student branch.

Certificates

Droidcon: Test-Driven Development on Android — [Credential ID](#) | JetBrains: Kotlin for Java Developers — [Credential ID](#)

Languages

English — C1 | Persian — Native | German — A1 (actively learning)
